Wheel & Headlight Sealant polymer protectant

Wheel & Headlight Sealant creates a tough coating on wheels and headlights. It uses curable polymers and resins which attach to the surface using covalent bonds. This nano technology provides an extra layer of protection for your vehicle components. The wheels will resist road salt & brake dust, making it easier to clean. The headlights will have an extra layer of protection so they won't fade or yellow from UV light, detergents, road salt, etc.

FOR PROFESSIONAL USE ONLY

Directions

(For optimum performance. Apply sealant to a clean and dry surface.)

1. Shake well before use.
2. Make certain the surface is cool to the touch.
3. Properly clean surface before applying.
4. Spray a thin coating to the wheels and/or headlights working your way around the vehicle.
5. Buff surfaces with a clean microfiber towel to create a slick, high-shine finish.

Key Features

- Easy on, Easy off formula
- Contains long-lasting Nano Polymers
- Covalent Bond
- UV Resistant
- Resist Brake Dust
- Extremely Durable Coating
- High-Shine Finish
